ManageEngine Password Manager Pro

If you are an IT Administrator responsible for securely managing your IT infrastructure, check yourself:

- Are you drowning in a pile of privileged passwords?
- Do you store administrative passwords in spreadsheets & flat files?
- Do you find it difficult to track who has access to which accounts?
- Do you laboriously logon to each application separately to periodically change passwords?

If yes, you certainly need Password Manager Pro!

Taking effective control of administrative passwords using Password Manager Pro (PMP) could significantly save your time, cost and resources, reduce the risk of security attacks and improve efficiency. PMP is a trusted solution to securely store, access and administer shared administrative passwords. It enables IT managers to maintain a central repository of passwords, enforce standard password policies and control unauthorized user access to shared passwords. It also provides a complete record of 'who', 'what' and 'when' of password access.

Securely Store, Selectively Share, Automatically Reset & Completely Control Privileged Passwords

Scope of PMP for Your Organizational Role

IT Managers

- Take complete control over all privileged passwords
- Enforce standard password management policies
- Audit password usage & abuse across the enterprise

IT Administrators

- Maintain a secure, central repository of all enterprise passwords
- Grant password access to users based on access control rules
- Automate password management tasks

Network Security Professionals

- Prevent unauthorized access to passwords
- Keep track of 'who', 'what' and 'when' of changes

Finance Heads

- One-stop place to store and access passwords of finance accounts
- Storing passwords of clientele accounts

Use PMP to ...

- **Store** - Securely store thousands of privileged passwords
- **Own** - Take full ownership of passwords stored by you
- **Share** - Selectively share passwords with other users on need basis
- **Reset** - Automatically Reset passwords of remote resources
- **Audit** - Have complete record of 'who' accessed 'what' passwords and when
- **Manage** - Take full control of your passwords

Passwords Reside in Safe Custody ...

- Passwords are encrypted using the Advanced Encryption Standard (AES)
- Stored in database; not accessible to remote hosts
- Data protection at various levels
- Role-based, fine-grained user access control for passwords
- Leveraging third party authentication (LDAP/AD) for increased security
- All transactions through HTTPS
- Automated backup & disaster recovery

"For effectively managing IT systems in an organisation with multiple domains and applications, it's become essential to store passwords in a safe, secure and functional way. Password Manager Pro is an easy to use tool, that provides us with everything we need to achieve our password security goals." **Phill Charlton, Infrastructure Specialist, Sara Lee Information Centre of Excellence**
